[Report a data error here](#)**Abstract of DE4340280**

A set of structural parts for a housing made of plastic for the accommodation of electric components (16), sensors and/or circuits, having a frame (1) in which electrical conductors (9, 10) are embedded which passed through the frame (1) from the inside to the outside, having a base (20) which can be attached to the frame (1) on its bottom (2), and having a cover (30, 40) which can be attached to the frame (1) on its top (3). The bottom (2) and the top (3) of the frame (1) are profiled such that they complement one another in such a manner that two identical frames (1) can be joined together without any play by means of the bottom (2) and top (3).
